I am a keen amateur photographer. I currently use an Olympus C-5050 Zoom, a 0.7x Wide Conversion lense and FD, UV and PL filters to take my photos.

I take the photos in RAW format and then process the images for levels, contrast, white balance, colour balance and closeness of crop with Adobe Photoshop CS2. I place some of the images in an online photo album (using the Open Source Coppermine Photo Gallery setup on my webhost's server).I am saving for a Nikon D70s digital SLR.
